Open Public Consultation on the revision of the general pharmaceutical legislation

Fields marked with * are mandatory.

Introduction

On 25 November 2020, the Commission published a Communication on a Pharmaceutical Strategy for Europe.

The Pharmaceutical Strategy identifies flagship initiatives and other actions to ensure the delivery of tangible results. As part of the implementation of the strategy, the Commission is evaluating the general pharmaceutical legislation[1] and assessing the impacts of possible changes in the legislation as described in the relevant inception impact assessment.

This public consultation aims to collect views of stakeholders and the general public in order to support the evaluation of the existing general pharmaceutical legislation and the impact assessment of its revision. It builds further on the public consultation[2] conducted for the preparation of the pharmaceutical strategy for Europe. The replies to that consultation will be taken into account for the revision of the general pharmaceutical legislation. The present questionnaire should be seen as a continuation of that process.

In parallel, the legislation for medicines for rare diseases and children is being revised as well. Separate consultation activities have been carried out for that revision.

This questionnaire is available in all EU languages and you can reply in any EU language. You can pause any time and continue later. You can download your contribution once you have submitted your answers.

A summary on the outcome of the public consultation will be published by the Commission services on the 'Have your say' portal.

We thank you for your participation.

*[1] **Directive 2001/83/EC** of the European Parliament and of the Council of 6 November 2001 on the Community code relating to medicinal products for human use (OJ L 311, 28.11.2001, p. 67)*
***Regulation (EC) No 726/2004** of the European Parliament and of the Council of 31 March 2004 laying down Community procedures for the authorisation and supervision of medicinal products for human and veterinary use and establishing a European Medicines Agency (OJ L 136, 30.4.2004, p. 1)*
[2] A report analysing the results of the pharmaceutical strategy consultation was published in November 2020.

About you

* Language of my contribution

The Commission will publish all contributions to this public consultation. You can choose whether you would prefer to have your details published or to remain anonymous when your contribution is published. **For the purpose of transparency, the type of respondent (for example, 'business association, 'consumer association', 'EU citizen') country of origin, organisation name and size, and its transparency register number, are always published. Your e-mail address will never be published.** Opt in to select the privacy option that best suits you. Privacy options default based on the type of respondent selected

* **Contribution publication privacy settings**

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

- **Anonymous**
  Only organisation details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published as received. Your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.
- **Public**
  Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published. Your name will also be published.

☑ I agree with the personal data protection provisions

Looking back

As mentioned in the Inception Impact assessment, the revision aims to tackle the following problems:

- Unmet medical needs and market failures for medicines other than medicines for rare diseases and children;
- Unequal access to available and affordable medicines for patients across the EU;
- The current legislative framework may not be fully equipped to respond quickly to innovation;
- Inefficiency and administrative burden of regulatory procedures;
- Vulnerability of supply of medicines, shortages of medicines;
- Environmental challenges and sustainability;
- Any other issues, which might emerge from the evaluation.

Q1 In your opinion, are there any other issues that should be addressed in this revision?

800 character(s) maximum

We believe the current legislation is too narrow in scope & overlooks innovation of value-added medicines. Ready to administer presentations of established or compounded drugs have the potential to provide a sustainable supply chain aimed at improving patient safety while releasing significant capacity & cost from care delivery; in turn improving cost effectiveness and freeing time to care for patients
Member States should apply criteria to strengthen European manufacturing footprint in national procurement procedures & pricing policy & Environmental criteria.
Substantial changes in the regulatory status of pharmaceutical products based on published journal articles and analyses should not be made in the case of unavailability of anonymized raw data for independent verification and audit

Q2 How has the legislation performed in terms of the following elements?

	Very well	Well	Moderately	Poorly	Very poorly	Don't know
1. Fulfilling its public health protection mission for patients and society.	○	◉	○	○	○	○
2. Promoting the development of new medicines, especially for unmet medical needs.	○	◉	○	○	○	○
3. Enabling timely development of medicines at all times, including during crises.	○	○	◉	○	○	○
4. Enabling timely authorisation, including scientific evaluation, of medicines in normal times.	○	○	◉	○	○	○
5. Enabling timely authorisation, including scientific evaluation during crises.	○	○	◉	○	○	○

6. Adapting efficiently and effectively to technological and scientific advancements and innovation.	○	○	◉	○	○	○
7. Ensuring medicines are of high quality, safe and effective.	○	◉	○	○	○	○
8. Addressing the competitive functioning of the market to support affordability.	○	○	◉	○	○	○
9. Ensuring the availability of generic[3] and biosimilar[4] medicines. *[3] "Generic" is a copy of a medicine based on simple or chemical molecules.* *[4] "Biosimilar" is a copy of a medicine based on biological molecules.*	○	○	◉	○	○	○
10. Ensuring that new medicines are timely available to patients in all EU countries.	○	○	◉	○	○	○
11. Ensuring that medicines stay on the market at all times and that there are no shortages.	○	○	◉	○	○	○
12. Ensuring that authorised medicines are manufactured, used and disposed of in an environmentally friendly manner.	○	○	◉	○	○	○
13. Ensuring that the EU system for development, authorisation and monitoring of medicines, including its rules and procedures, is understandable and easy to navigate.	○	○	◉	○	○	○
14. Attracting global investment for medicine innovation in the EU.	◉	○	○	○	○	○

Is there any other aspect you would like to mention, including positive or unintended effects of the legislation, or would you like to justify your replies?

800 character(s) maximum

Access is not available to all patients in all EU countries at once, as HTA-based reimbursement decisions take time and vary across member states. The EU legislative framework should respond quicker and support access to new innovations such as digital solutions, AI enabled systems, and value-added medicines.
New pricing & tendering incentives are needed which are not focused on lowest cost, but on recognising value of innovative presentations of generics.
The European Commission should maintain status quo between rewarding innovation and timely access to affordable off-patent medicines whilst recognizing the need to address unsustainable procurement practices at member state level to avoid market consolidation & shortages.

Looking forward

This section reflects on possible solutions to address the problems identified in the inception impact assessment mentioned in the previous section.

Your contribution will help us in defining the way forward.

UNMET MEDICAL NEEDS

One of the aims of the strategy is to stimulate innovation and breakthrough therapies, especially in areas of 'unmet medical need'.

Regulators, health technology assessment experts and representatives of bodies responsible for reimbursing or paying for medicines ('payers') are discussing a definition or a set of principles for 'unmet medical needs'[5] in order to achieve the objectives of the general pharmaceutical legislation. The discussions reveal different perceptions of what is an 'unmet medical need'. Convergence on this key concept should facilitate the design of clinical trials, generation of evidence and its assessment, and the quick availability on the market of these products and ensuring that innovation matches the needs of patients and of the national health systems.

The purpose of this question is to identify elements that are important in defining what is unmet medical need and in which areas of unmet medical need innovation should be stimulated.

[5] Please note that a similar discussion is taking place in the context of medicines for rare diseases and for children. The concept of 'unmet needs' in the context of rare diseases and children might be slightly differentiated compared to 'unmet needs' in the context of the general pharmaceutical legislation.

Q3 How important are the following elements for defining 'unmet medical needs'?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Seriousness of a disease.	○	◉	○	○	○	○
2. Absence of satisfactory treatment authorised in the EU.	○	◉	○	○	○	○
3. A new medicine has major therapeutic advantage over existing treatment(s).	○	○	◉	○	○	○
4. Lack of access for patients across the EU to an authorised treatment.	○	○	◉	○	○	○
5. Other (please specify).	○	◉	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined elements, or would you like to justify your replies?

800 character(s) maximum

The definition of unmet medical needs should also consider the patient & societal perspectives in addition to the clinical one.We should improve the harmonised implementation of clinical guidelines & medical recommendations for priority therapy areas across the EU; implementation should be monitored and clear KPIs should be set in support.The collaboration among medical societies and authorities, incl. EMA, should be improved.The environmental impact should be considered in the pricing, as well as the footprint of the company in Europe, as this has economic and social effect.
Access to innovation should be balanced with maintaining access to affordable off-patent medicines, incl. biosimilars, as these allow savings to finance new innovative medicines and reduce reimbursement restrictions.

INCENTIVES FOR INNOVATION

The general pharmaceutical legislation guarantees the pharmaceutical innovator, typically a company, regulatory data and market protection for its new medicinal product. This data protection makes sure that another pharmaceutical company cannot re-use the proprietary data of the innovator for 8 years. Market protection makes sure that a generic or biosimilar medicine cannot be marketed until 10 years after authorisation. This dual protection shields a pharmaceutical innovator from generics or biosimilars on the market for 10 years. This protection is part of the EU system of incentives for innovation. The EU regime of intellectual property protection provides an additional protection coverage but is beyond the scope of this questionnaire and the revision of the general pharmaceutical legislation.

Q4 What do you think of the following measures to support innovation, including for ‘unmet medical needs’?

	Very important	Important	Fairly important	Slightly important	Not important	Don’t know
1. The current data and market protection periods for innovative medicines: 10 years of market protection, and 8 years of data protection.	○	○	○	○	○	○
2. Provide different data and market protection periods depending on the purpose of the medicine (i.e. longer period of protection in areas of unmet medical need).	○	○	○	○	○	○
3. Reduce the data and market protection periods to allow earlier access for generic and biosimilar medicines to the market.	○	○	○	○	○	○
4. Introduce new types of incentives[6] on top of the existing data and market protection for medicines addressing an ‘unmet medical need’. *[6] Examples of new incentives are a transferable exclusivity voucher or a priority review voucher. A transferable exclusivity voucher would give the legal right to extend the protection time period of any other patented medicinal product, in exchange for the successful regulatory approval of a specified medicine for unmet medical need (e.g. an antibiotic). The voucher would be transferable or saleable, and may impact the turnover and profitability levels of other products in a developer’s portfolio. A priority review voucher gives priority to the assessment of the application of the medicine in question or another medicine in the applicant’s portfolio.*	○	○	○	○	○	○
5. Early scientific support and faster review/authorisation of a new promising medicine for an unmet medical need.	○	○	○	○	○	○
6. Public listing of priority therapeutic areas of high unmet medical need to support product development by providing incentives.	○	○	○	○	○	○
7. Require transparent reporting from companies about their research and development costs and public funding as a condition to obtain certain incentives.	○	○	○	○	○	○
8. Other (please specify)	○	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

ANTIMICROBIAL RESISTANCE[7]

Antimicrobial resistance (AMR) is the ability of microorganisms (such as bacteria, viruses, fungi or parasites) to survive and grow over time and no longer respond to medicines making infections harder to treat and increasing the risk of infections, severe illness and death. Antimicrobials include antibiotics, which are substances that fight bacterial infections. Overprescribing, overuse and inappropriate use of antibiotics are key drivers of AMR, leading to harmful health outcomes. The question below is intended to collect opinions on both the incentives for the development of new antimicrobials as well as possible option on their prudent use.

[7] amr_2017_action-plan.pdf (europa.eu).

Q5 Should there be specific regulatory incentives for the development of new antimicrobials while taking into account the need for more prudent use and if so what should they be?

1000 character(s) maximum

FUTURE PROOFING: ADAPTED, AGILE AND PREDICTABLE REGULATORY FRAMEWORK FOR NOVEL PRODUCTS

Novel products and innovative solutions continue to challenge the understanding of a “medicinal product” with low volume, and cutting-edge products (e.g. medicines combined with self-learning artificial intelligence) becoming a new reality. ‘Bedside’ manufacture of more individualised medicines changes the way medicines are produced. There are classification and interplay challenges with other medical products, such as medical devices and substances of human origin, or related to the combination of clinical trials with in vitro diagnostics/medical devices and medicines. In addition, certain cell-based advanced therapy medicines[8] are offered in hospital settings and are exempted from aspects of the pharmaceutical legislation. These developments offer possibilities for novel promising treatments and new ways of authorising and monitoring medicines but they are also testing the limits of the current regulatory system. They need to be addressed to unfold their potential while safeguarding the principles of high quality, safety and efficacy of medicines.

Digital transformation is affecting the discovery, development, manufacture, evidence generation, assessment, supply and use of medicines. Medicines, medical technologies and digital health are becoming increasingly integral to overarching therapeutic options. These include systems based on artificial

intelligence for prevention, diagnosis, better treatment, therapeutic monitoring and data for personalised medicines and other healthcare applications.

[8] Advanced therapy medicinal products (ATMPs) are medicines for human use that are based on genes, tissues or cells. They offer ground-breaking new opportunities for the treatment of disease and injury.

Q6 How would you assess the following measures to create an adapted, agile and predictable regulatory framework for novel products?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	○	○	○	◉	○	○
2. Create a central mechanism in close coordination with other concerned authorities (e.g. those responsible for medical devices, substances of human origins) to provide non-binding scientific advice on whether a treatment/product should be classified as a medicine or not.	○	◉	○	○	○	○
3. Make use of the possibility for 'regulatory sandboxes'[9] in legislation to pilot certain categories of novel products/technologies. *[9] Some very innovative solutions fail to see the light of day because of regulations which might be outdated or poorly adapted for fast evolving technologies. One way to address this is through regulatory sandboxes. This enables innovative solutions not already foreseen in regulations or guidelines to be live-tested with supervisors and regulators, provided that the appropriate conditions are in place, for example to ensure equal treatment. Regulatory sandboxes provide up-to-date information to regulators and supervisors on, and experience with, new technology, while enabling policy experimentation. See COM(2020) 103 final.*	○	◉	○	○	○	○
4. Create adaptive regulatory frameworks (e.g. adapted requirements for authorisation and monitoring with possibility to adjust easily to scientific progress) for certain novel types of medicines or low volume products (hospital preparations) in coherence with other legal frameworks (e.g. medical devices and substances of human origin[10]) and respecting the principles of quality, safety and efficacy. *[10] Substances that are donated by humans such as blood, plasma, cells, gametes, tissues and organs and are applied as therapy. Some substances of human origin can also become starting materials to manufacture medicines.*	○	◉	○	○	○	○

5. Introduce an EU-wide centrally coordinated process for early dialogue and more coordination among clinical trial, marketing authorisation, health technology assessment bodies, pricing and reimbursement authorities and payers for integrated medicines development and post-authorisation monitoring.	○	○	○	◉	○	○
6. Other (please specify)	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

The Q6 is written from the perspective of on-patent medicines, innovative products but some elements of openness to evidence generation shall also apply to off-patent medicines' development. The amendments to the Directive 2001/ 83 shall also cover an evolution of science and different way of generating scientific evidence while developing products with known molecules, fitness for purpose of the regulatory requirements shall be well reflected in the revised proposal of the legislation. it is important to think already now on applicability of new measures on follow-on, off patent medicines after expiry of exclusivity/ IP rights.

Q7. Do you think that certain definitions and the scope of the legislation need to be updated to reflect scientific and technological developments in the sector (e.g. personalised medicines, bedside manufacturing, artificial intelligence) and if so what would you propose to change?

1000 character(s) maximum

"To futureproof the EU's biosimilar market and therefore provision of affordable future biosimilars to citizens, the Commission should expedite development guideline revision, taking into account rapid evolution in protein analytic science and agency experience to move towards clinical efficacy trial waivers as a default. Furthermore, the EC should continue its leadership in biosimilars by undertaking urgent inter-regulatory agency dialogue to develop global development guidance." - During the revision of the legislation, it is important to think already now on applicability of new measures on development of follow-on medicinal products, after expiry of exclusivity/ IP rights.

REWARDS AND OBLIGATIONS RELATED TO IMPROVED ACCESS TO MEDICINES

Some medicines and therapies do not always reach patients in all EU countries, so patients in the EU still have different levels of access to medicines, depending on where they live. Even if a medicine received an EU-wide authorisation, companies are currently not obliged to market it in all EU countries. A company may decide not to market its medicines in, or decide to withdraw them from, one or more countries. This can be due to various factors, such as national pricing and reimbursement policies, size of the population and level of wealth, the organisation of health systems and national administrative procedures. Smaller markets in particular face challenges for availability and supplies of medicines.

Q8 How would you assess the following measures to improve patient access to medicines across the EU?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules which provide no obligation to market medicines in all EU countries.	◉	○	○	○	○	○

2. Require companies to notify their market launch intentions to regulators at the time of the authorisation of the medicine.	○	○	○	○	◉	○
3. Introduce incentives for swift market launch across the EU.	○	◉	○	○	○	○
4. Allow early introduction of generics in case of delayed market launch of medicines across the EU, while respecting intellectual property rights.	○	◉	○	○	○	○
5. Require companies to place – within a certain period after authorisation – a medicine on the market of the majority of Member States, that includes small markets.	○	○	○	○	◉	○
6. Require companies withdrawing a medicine from the market to offer another company to taker over the medicine.	○	○	○	○	◉	○
7. Introduce rules on electronic product information to replace the paper package leaflet.	○	◉	○	○	○	○
8. Introduce harmonised rules for multi-country packages of medicines.	○	◉	○	○	○	○
9. Other (please specify).	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

Allow companies to re-direct stock between the countries especially where it's needed in case of shortages; facilitate the acceptance of leaflets in other languages.
A transparent and well-designed exchange of the pharma legislation with other legislations as MDR/IVDR need to be included. The regulatory framework should have a flexibility and adaptability with a specific pathway available when an accelerated process is needed and/or to evaluate new, advanced technologies.
Bx have not been associated with any shortages & should be excluded from additional measures put onto MAHs however to avoid potential future market consolidation, sustainable procurement practices are now imperative.
Incentives for maintaining marketing authorisation should also be provided.

ENHANCE THE COMPETITIVE FUNCTIONING OF THE MARKET TO ENSURE AFFORDABLE MEDICINES

The affordability of medicines has implications for both public and household finances. It poses a growing challenge to pay for medicines in the majority of Member States. Often, innovative medicines have higher prices, while there are growing concerns among stakeholders about the real-life effectiveness of some medicines and related overall costs. This puts the budgetary sustainability of health systems at risk, and reduces the possibilities for patients to have access to these medicines. Generics and biosimilars[11] of medicines which no longer benefit from intellectual property protection (off-patent medicines) may provide accessible and affordable treatments. They also increase the availability of alternative treatment options for patients. They may also increase competition between available medicines. However, experience shows that there are still barriers for medicines entering the EU market, including for generics or biosimilars.

[11] "Generics" are copies of medicines based on simple or chemical molecules; "biosimilars" are copies of medicines based on biological molecules.

Q9 In your view, to what extent would the following measures support access to affordable medicines?

	To a great extent	To a certain extent	No change	Very little	Not at all	Don't know
1. Maintain the current rules.	○	◉	○	○	○	○
2. Stimulate earlier market entry through a broader possibility to authorise generics /biosimilars despite ongoing patent protection ('Bolar exemption')[12]. *[12] The Bolar exemption allows companies to conduct research on patent protected medicines under the condition that it is with a view to apply for a marketing authorisation for a generic.*	○	◉	○	○	○	○
3. Create a specific (regulatory) incentive for a limited number of biosimilars that come to the market first.	○	○	○	○	○	◉

4. Introduce an EU-wide scientific recommendation on interchangeability for specific biosimilars.	○	○	○	○	○	◉
5. Introduce other, non-legislative measures, such as joint procurement to reinforce competition while addressing security of supply and environmental challenges.	○	○	○	◉	○	○
6. Other (please specify).	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

The term "affordable medicines" should be defined more broadly: medicines that add value throughout the supply chain compared to alternative treatments, not through price.
To avoid delays in Gx/bios, the new legislation should formally prohibit all forms of patent linkage.EMA must give more importance to Bx in the future and streamline the clinical requirements for them to ensure the sustainability of the EU biosimilars market. It will be critical that procurement decisions are guided by value criteria & solutions being purchased based upon multiple criteria, eg. including the total cost of care, supply resilience, environmental challenges. Value based procurement can also be supported with partnership agreements and consider novel pricing and payment mechanism for medicines as proposed.

REPURPOSING OF MEDICINES

Repurposing is the process of identifying a new use for an established medicine in a disease or condition other than that it is currently authorised for. Repurposing of older (off-patent) medicines constitutes an emerging and dynamic field of medicines development, often led by academic units and medical research charities, with the potential for faster development times and reduced costs as well as lower risks for companies. This is because repurposing commonly starts with substances that have already been tested and many have demonstrated an acceptable level of safety and tolerability. The objective is to identify the opportunities and address any regulatory burdens to facilitate repurposing of off-patent, affordable medicines.

Q10 What measures could stimulate the repurposing of off-patent medicines and provide additional uses of the medicine against new diseases and medical conditions? Please justify your answers.

1000 character(s) maximum

Invest in stability studies to maximise the number of drug formulations that can be produced in batches using automation
Establish a regulatory mechanism to enable automated, terminally sterilized compounded medicines to be brought to market quickly and cost effectively
Establish a rapid technology assessment pathway measuring value in improved patient safety and operational efficiency at point of care for ready to administer “differentiated generics”
Promoting eg tax waiving, fast-track approval, grants & regulatory fee waivers
Allowing the use of foreign comparator products consistently across all medicines, which will permit to pursue single global development for generic medicines
Encouraging data-driven outcomes research to recognize “fallen angels” among old drugs should be undertaken. Sometimes good drugs might have fallen into disuse simply because they are not commercially profitable
Common packaging for all EU countries if stimulation needed to repurpose off-patent med.

SECURITY OF SUPPLY OF MEDICINES

Shortages of medicines and the vulnerabilities in the pharmaceutical supply chain continue to be concerns in the EU. Shortages of medicines can have serious impacts on patient care. Under the current pharmaceutical legislation, pharmaceutical companies and wholesalers must, within the limits of their responsibilities, ensure a continued supply of medicines once they are placed on the market in the EU. Companies must also notify national authorities at least two months before an expected shortage or planned market withdrawal.

Q11 What is your view on the following measures to ensure security of supply of medicines in the EU?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	○	○	◉	○	○	○
2. Earlier reporting of shortages and market withdrawals to national authorities in a common format.	○	○	◉	○	○	○
3. Companies to have shortage prevention plans.	○	○	○	◉	○	○
4. Companies to have safety stocks.	○	○	◉	○	○	○
5. Monitoring of supply and demand at national level.	○	○	◉	○	○	○
6. Introduce a shortage monitoring system at EU level.	○	○	◉	○	○	○
7. Require companies to diversify their supply chains, in particular the number of key suppliers of medicines and components.	○	○	○	○	◉	○
8. Companies to provide more information to regulators on their supply chain.	○	○	○	○	◉	○
9. Introduce penalties for non-compliance by companies with proposed new obligations.	○	○	○	○	◉	○
10. EU coordination to help identify areas where consolidation in the supply chain has reduced the number of suppliers.	○	◉	○	○	○	○
11. Other (please specify)	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

Drug shortage reporting should be simplified & it should avoid multiple reporting systems (EU vs nationals)
We need to harmonized rules across the EU, based on solidarity, whereby countries do not impose more stringent safety stock demands. These measures impede patients' access to life-saving medicines in other EU countries.
Companies should be allowed to re-direct stocks from one EU MS to another in case of shortages or demand for critical care drugs (ICU, critical care).
It's important to apply for an expedited review of the SPC manufacturing release, as a 6-month stockpile is a hurdle for EU manufacturing of Bx.
Practical measures should be encouraged to reduce the factors that create shortages, e.g.: price pressure; incentives for EU manufacturing footprint; regulatory flexibility

QUALITY AND MANUFACTURING

Medicines manufactured for the EU market must comply with the principles and guidelines of good manufacturing practice (GMP). GMP describes the minimum standard that a medicines manufacturer must meet in their production processes. GMP requires that medicines are of consistent high quality, are appropriate for their intended use and meet the requirements of the marketing authorisation or clinical trial authorisation.

Q12 What is your opinion of the following measures to ensure manufacturing and distribution of high quality products?

	Very adequate	Adequate	Neutral	Less adequate	Not adequate	Don't know
1. Maintain the current rules.	○	○	◉	○	○	○
2. Strengthen manufacturing and oversight rules.	○	○	○	○	◉	○
3. Adapt manufacturing rules to reflect new manufacturing methods.	○	◉	○	○	○	○

4. Include selected environmental requirements for manufacturing of medicines in line with the one health approach on antimicrobial resistance[13]. *[13] The one-health approach is a holistic and multi-sectorial approach to addressing antimicrobial resistance since antimicrobials used to treat infectious diseases in animals may be the same or be similar to those used in humans.*	○	○	○	○	◉	○
5. Increase Member State cooperation and surveillance of the supply chain in the EU and third countries.	○	○	○	◉	○	○
6. Strengthen and clarify responsibilities of business operators over the entire supply chain on sharing information on quality, safety and efficacy.	○	○	○	○	◉	○
7. Other (please specify).	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

The company addresses, that regulations becoming too strict and go in the opposite directions of the risk management guidelines, which is not science based anymore in some cases (Annex 1 & ICH Q9). Additionally, more and more stringent requirements are added annually, always at the expense of industry (elemental impurities, nitrosamines, FMD, IDMP, etc.).

ENVIRONMENTAL CHALLENGES

While access to pharmaceuticals is a priority, it is also important that the environmental impacts of those pharmaceuticals are as low as possible. The environmental risk assessments (ERAs) is currently not taken into account in the overall benefit/risk analysis which influences the delivery of a marketing authorisation (MA) of a medicine. ERA can influence risk management measures. Yet, ERA results are not decisive in the MA process.

Q13 How would you assess the following measures to ensure that the environmental challenges emerging from human medicines are addressed?

	Very important	Important	Fairly important	Slightly important	Not important	Don't know
1. Maintain the current rules.	○	◉	○	○	○	○
2. Strengthen the environmental risk assessment during authorisation of a medicine, including risk mitigation measures, where appropriate.	○	○	○	◉	○	○
3. Harmonize environmental risk assessment by national regulators, including risk mitigation measures.	○	○	◉	○	○	○
4. Increase information to the health care professionals and the general public about the assessment of environmental risks of medicines.	○	○	○	◉	○	○
5. Allow companies to use existing data about environmental risks for authorisations of a new medicine to avoid duplicating tests.	○	◉	○	○	○	○
6. Other (please specify).	◉	○	○	○	○	○

Is there any other aspect you would like to mention, for example on the potential economic, social, environmental or other impacts of the outlined measures, or would you like to justify/elaborate your replies?

800 character(s) maximum

The Pharma legislation should include provisions to reduce pharmaceuticals presence in the environment and value investments done to realize these changes.
Industry supports the objectives of the ERA and believes that one should only focus on those substances that really pose a risk to the environment.To avoid high requirements associated with very high costs and the risk of discontinuing the production of important medicinal products, companies marketing the same active substance-containing products should be allowed to access a common data pool to avoid possible duplicate testing and increase transparency to ensure an optimal ERA process.If data cannot be transferred from the original file to the generic ones, there would be fewer products, less competition & higher prices on the market

Q14 Is there anything else you would like to add that has not been covered in this consultation?

900 character(s) maximum

We should invest more resources in harmonising training of healthcare professionals and of clinical practice & care delivery across EU to ensure that patients have access to the same quality of care. EU funding programmes like Horizon Europe, EU4Health have a crucial role to play in this sense.
The focus of the consultation should also be on internal/prevent market failures. Specifically, the legislation should cover that EU member states should ensure a competitive pharmaceutical industry and a functioning internal market. For multi-source products (70% of prescription medicines), appropriate reforms of procurement practices to include MEAT criteria and ensure multi-winners for consolidated buying and introduce new pricing rules for off-patent medicines will help to create the headroom to implement legislative changes while maintaining a competitive business.

Q15 In case you would like to share a document that substantiates your replies, please upload it below (optional).

Only files of the type pdf,txt,doc,docx,odt,rtf are allowed
